

# Relieve Project Stress

**Build Teams**  
**Control Budgets**

Project and senior managers know that all IT projects have risk.

The Cushing Practice provides an integrated series of quantitative **risk assessment and mitigation planning** services to give IT providers:

- a “success factors” database to apply against IT initiatives. This allows for a comparison with best-in-class performance supported by a constantly updated knowledge- and experience-based database.
- both the objective process and the tools necessary to examine a project, a series of projects, or an overall IT strategy.
- a performance standard of measurable goals that can be targeted, achieved, and monitored.
- a method of initiating effective team building.
- detection of likely cost overruns – before they occur.
- quantitative data, benchmarks, metrics, and predictive & prescriptive outputs.

Contact The Cushing Practice for more information, or visit [www.cushing.com/risk\\_solution.html](http://www.cushing.com/risk_solution.html)
